Reduces sun damage

Our Standard System is our most cost-effective option. It can be installed on new or existing structures to offer a transparent cover that blocks weather and UV rays. Plus, it is a great way to protect electronics, toys, and patio furniture from the elements.

This system is highly versatile as the sheets can be cut to the necessary length and width. It is ideal for installation on curved or arched structures as well as pre-existing pergolas.

Each system is sold with all the accessories needed to install. Visit us online or at your local Regal Plastics branch for installation instructions, videos, or support from our sales staff.
